6. Gas spring: TUV approved Class 3;
7. Base: Aluminum alloy star base
8. Castor: nylon with fiber frame PU pad, with ABS spacer against noise.
9. BIFMA standard.

advantage

To offer users more convenient using experience, our designers designed this unique paddle shift control system: Most basic and frequently used functions "chair height" & " backrest tilt lock" are adjusted by armrest paddle, no need to bend waist, 8 times faster than traditional way. Paddle shift on office chair right arm: adjust seat height. Paddle shift on office chair left arm: adjust backrest tilt, 15 locks in 33 degrees.

Common parts of office chairs

The office chair is basically composed of 10 major components: headrest, seat back, armrest, waist off (lumbar support), seat (seat cushion), chassis (tension adjustment, tilting mechanism, etc.), air rod, footrest, star foot, and caster. . The basic function of the chair is to support the user's body in the working or resting state, while the office chair requires that it can be used in both working and resting states. Therefore, the office chair has tilt (reclining function), lifting function and foot pedal to realize functions such as office, rest and lunch break.
