Product Details of HF Digital Radiography System

1). Type of generator and X-ray tube:

a. Advanced 40kHz high frequency high voltage type generator, realize 1ms instant exposure, high performance.

b. Three exposure method free change: KV, mAstwo adjustment, KV,mA, s three adjustment, to satisfy different habit of different doctors.

c. Rotate double anode 0.6/1.3, with high heat capacity of 107KHU.

d. Digital micro-processed closed loop control and malfunction alarming system to reduce the dose of X-ray, protect the patients and doctors very well.

e. LCD touch screen, beautiful appearance and convenience to operate.

2). Flat Panel Detector

I Apply with domestic brand Flat panel detector, which could give perfect digital images directly.

I 3K×3K Acquisition matrix, 143um pixels size, and 3.7Lp/mm ultimate spatial resolution, with DQE values ≥70%

I 17inch ×17inch Large acquisition area and with the non-center processing technology, no matter the center and border, the quality of the image is the same.

I The detector could be rotated ±45 degree along the axis direction, to satisfy the different photograph requirement of every body parts, such as Ankle joint, lateral spine.

I The detector has the self-protection function. It can stop to move when it detect the distance in front of the barrier.
